Italian Market details:

Partial Settlement

At the end of the day, the Italian market applies a shaping parameter functionality to break down the original settlement instructions that failed during the overnight and daylight net settlement cycles into smaller shapes. The shaping threshold for equities in the Italian market is EUR 2,000,000 of nominal value.

Handling of Income event compensations for Italian Market:

Trades with trade date before ex-date and settled after record date (i.e. late trades) are eligible for compensation in Italian market. Income payment compensations are handled as explained below (applicable for both buy and sell positions) following local market practice.

Step 1: Cancellation of instructions at Monte Titoli

Pending transactions have to be cancelled (Clearstream in its role as settlement agent for Eurex Clearing will cancel Eurex Clearing's part of settlement instruction). The member will be informed to cancel his instruction. The member's settlement agent has to cancel his part of the settlement instruction at the local market with Monte Titoli. The pending transaction is cancelled by the CSD.

Step 2: Entering new instructions at Monte Titoli

Clearstream re-instructs with all attributes of the original settlement instruction except of the settlement amount. The settlement amount is reduced by income payment (compensation) and 3,56% indemnity (or the then applicable market penalty rate). For example, if the income payment is 1.000 Euro and original settlement amount is 10.000 Euro then the modified settlement amount will be 8.964,4 Euro (10.000 – 1.000 – 35,6)

The member's settlement agent needs to re-instruct his original instruction with the modified amount to match the re-instruction from Eurex Clearing. The re-instruction matches at the CSD.

Step 3: CCP reporting

Eurex Clearing updates the pending delivery instruction with the modified amount. The member reports will display the modified amount with CA indicator in pending and settled trade reports as Y.
